

AMASAMYA: Inclusive Technology & Professional Learning Platform

A Strategic Proposal & Master Execution Blueprint for Equal Opportunity in Tech, Language, and Career Empowerment

Platform & Academy Leadership:

- Akhilesh Malani - Founder & Creator, AMASAMYA | Lead, School of Technology & Accessibility Engineering
(Enterprise Accessibility Architect with 16+ years experience across Google, Bank of Montreal, Dun & Bradstreet, Oracle; creator of AMASAMYA audit suite across Android, Web, and Extensions; author of VPAT 2.4, GIGW 3.0, and IS 17802 engines)
- L. Subramani - Founding Academic Director, AMASAMYA Academy | Lead, School of English & Professional Communication
(Veteran Journalist with 28+ years experience, former Chief Copy Editor at Deccan Herald, acclaimed author of 'Lights Out', communications strategist & disability advocate)

Document Version: 2.1 (Platform & Academy Master Plan) | Date: August 2026 | Distribution: Confidential / Internal

1. Executive Vision and Core Mission

The mission of the AMASAMYA platform is to create a barrier-free ecosystem where persons with disabilities and mainstream learners build professional English and accessibility engineering skills side by side, taught by educators who navigate the digital world using the exact same assistive technology stack as the learners.

AMASAMYA is founded and engineered by Akhilesh Malani as an overarching accessibility technology ecosystem. Within this ecosystem, AMASAMYA Academy is co-led in academic partnership with L. Subramani to provide rigorous, executive-level language and professional communication training.

Every learner completing the AMASAMYA curriculum leaves with two tangible, career-defining assets:

- **1. Executive-English Mastery:** Corporate-grade written and spoken communication ability tailored for multinational and executive workplaces.
- **2. Marketable Technical Identity:** Verifiable credentials in accessibility engineering, standards compliance (WCAG 2.2, GIGW 3.0, IS 17802), or accessible content creation.

2. Market Landscape & Strategic Gap Analysis

The four primary learner segments addressed by AMASAMYA are completely underserved on key functional dimensions by incumbent offerings:

Learner Segment	Incumbent Solutions & Limitations	The AMASAMYA Advantage
Blind Adults preparing for corporate English roles	Duolingo, Grammarly, ELSA: Heavily visual (drag-and-drop, image cues, video-first). Focus on casual dialogue; none deliver corporate-register writing or screen-reader usability end to end.	Audio-first, screen-reader native pedagogy curated by L. Subramani. Focuses directly on business writing, nuance, and verbal workplace fluency.
Blind Educators authoring accessible courses	Canvas, Moodle, Coursera authoring suites: Authoring dashboards are visual-first. Blind educators cannot independently build, organize, or publish courses without sighted assistance.	Inclusive audio-first authoring dashboard. Non-visual workflow with polite live region announcements, keyboard shortcuts, and simple quiz builders.
Accessibility Engineers seeking Indian standards training	Deque University, W3C WAI: Prohibitively priced (\$150 to \$300 USD per course). English-only; zero coverage of GIGW 3.0, IS 17802, or SEBI accessibility mandates.	Affordable domestic pricing in INR, integrated audit tool exercises, full coverage of Indian national standards alongside global WCAG 2.2 benchmarks.
Indian Government & Enterprise DEI Programs	DIKSHA, SWAYAM, Sugamya Pustakalaya: High volume of content, but relies heavily on inaccessible PDFs, image-only quizzes, and uncaptioned video. No interactive labs.	Certified accessible LMS environment, interactive technical labs, and verifiable compliance reporting (VPAT 2.4 ACR).

3. What We Build in Year One vs. What We Deliberately Defer

To ensure flawless execution and avoid over-engineering, Version 2.1 strictly isolates Year One around core pedagogic proof and accessible infrastructure, deferring complex automation engines to Year Two.

Year-One Scope (v1): Core Pedagogical & Delivery Engines

- Pillar 1: School of English and Professional Communication (Led by L. Subramani)
- **Track A: English Foundations:** Phonics, sentence construction, tense consistency, vocabulary building, screen-reader friendly grammar drills, listening comprehension.

- **Track B: Professional & Corporate Writing:** High-impact business emails, status reports, technical documentation, copyediting, and jargon elimination.
- **Track C: Executive Verbal Fluency:** Meeting leadership, public speaking, voice modulation, interview mastery, and effective communication pace.
- **Track D: Journalism & Content Craft:** Long-form feature writing, opinion pieces, accessible alt-text authoring, and digital advocacy storytelling.
- Pillar 4a: Accessible LMS Learner Surface & Blind-Educator Audio-First Authoring
- **Learner Surface:** Full keyboard-only navigation, high-contrast palette, ARIA live region optimization, audio-first lesson streaming, and screen-reader optimized reading views.
- **Educator Authoring Tool:** Audio recording, structured lesson upload, and quiz authoring tool allowing a blind educator to independently create and publish a complete course without sighted assistance.

Note - Pedagogical Bridge (The Audio-to-Text Workflow): While instruction is delivered audio-first, writing mastery requires granular text interaction. Track B and D exercises follow a tight loop: (1) Listen to audio micro-lecture -> (2) Navigate accessible markdown sample text -> (3) Draft response in an accessible web editor -> (4) Receive structured rubric feedback from peer review circles and instructor office hours.

Year-Two Scope (v2): Scaled Automation & Interactive Sandboxes

- **Pillar 3: AMASAMYA CopyAudit Engine:** Automated readability, grammar, tone, and clarity evaluation engine. Deferred to Year Two because the underlying pedagogical rules and rubrics established by L. Subramani in Year One must be validated first.
- **Pillar 2b: AMASAMYA CodeLab:** Live browser code sandbox providing instant screen-reader utterance simulations. Deferred to Year Two because Year One engineering tracks can be effectively delivered via existing extension audits, lectures, and live code remediation exercises.

Out of Year-One Scope Entirely

- **Indic Regional Language Learning Paths:** Requires native-speaker instructors, script-specific screen reader QA, and regional localization. Planned as a v3 milestone post Year-One traction.
- **Full B2B Enterprise Sales Motion:** Enterprise procurement cycles span 6 to 18 months in India. Year One financial sustainability does not rely on enterprise closures; corporate outreach begins in Month 10 for Year Two delivery.

4. Twelve-Month Roadmap with Explicit Numeric Gate Conditions

Progression between phases is governed by strict numeric gate conditions. If a gate is not met, the leadership will iterate the current curriculum and product before investing capital in subsequent phases.

Phase 1 (Months 1 to 4): Foundation, First Cohort & Curriculum Lock

- Curriculum outline for Tracks A and B finalized, reviewed, and recorded by L. Subramani (8 initial audio-first lessons).
- Accessible LMS learner portal deployed; educator authoring tool at functional MVP.
- Enrolment of Cohort 1: 30 verified blind learners via AMASAMYA extension link and partnered disability organizations (with advanced placement testing for learners skipping Track A into Track B).

Gate to Phase 2: First cohort achieves at least 40% retention (12 of 30 learners reaching Level 2 completion) and written curriculum feedback submitted by at least 15 learners.

Phase 2 (Months 5 to 8): Tracks C & D, Paid Tier & Peer Review Circles

- Tracks C (Executive Verbal Fluency) and D (Journalism & Content Craft) recorded and published.
- Launch of individual paid subscription tier at introductory pricing (INR 999 per month).
- Enrolment of Cohort 2: Target 100 learners across free and paid tiers.
- Implementation of moderated Peer Writing Circles to scale assignment reviews without bottlenecking instructor bandwidth.
- Educator Co-Design Pilot: 3 external blind educators onboarded to test and publish through the authoring tool.

Gate to Phase 3: At least 20 active paying learners and at least 1 external blind educator successfully publishes a course through the platform.

Phase 3 (Months 9 to 12): Institutional Scale & Educator Platform Launch

- Corporate DEI and CSR outreach: 5 qualified corporate discussions; initiate 1 pilot program.
- Authoring platform moves out of beta and opens to verified community educators.
- Institutional partnership discussions initiated with 3 Indian universities and 2 blind schools.
- Technical and pedagogical scoping for Year Two engines (CopyAudit & CodeLab).

Gate to Year Two: 100 active paying learners OR 1 signed enterprise pilot OR 2 signed institutional MOUs. Any one of the three triggers Year Two expansion.

5. Monetisation Model & Financial Sustainability

The platform combines community affordability with enterprise and institutional revenue streams. The foundational track remains permanently free to protect community access.

- **Free Community Tier:** Full Track A (Foundations) plus Module 1 of Track B. Fully accessible LMS access with no time limit. Subsidized by paid tiers and corporate sponsorships.
- **Individual Paid Tier:** Complete Tracks A through D plus certification pathway plus peer circle participation. INR 999 per month or INR 8,999 per year (deliberately priced below foreign platforms like Deque to suit Indian professionals).

- **Corporate / CSR Sponsor-a-Scholar Tier:** Bulk licenses for corporate DEI hiring pipelines and accessibility engineering upskilling. INR 2 to 5 Lakhs per organization per year (includes up to 25 learners plus hiring pipeline visibility).
- **Institutional Tier:** Discounted, cost-recovery volume pricing for universities, special schools, and NGO training centers.
- **Grant Funding:** Pursue non-dilutive assistive technology and disability empowerment grants (e.g. MSJE, international inclusion foundations) to underwrite regional language modules in Year Two.

6. Governance, Intellectual Property, and Leadership Structure

- **Master Entity & Ownership:** AMASAMYA is owned and founded by Akhilesh Malani. The legal entity holding the master brand, website, and technology is owned 100% by Akhilesh Malani.
- **Software IP Ownership:** All AMASAMYA software IP (browser extensions, Android app, web audit engine, VPAT ACR generator, CodeLab, and platform source code) remains the exclusive, undiluted property of Akhilesh Malani.
- **Academy Leadership & Academic Partnership:** L. Subramani joins as Founding Academic Director of AMASAMYA Academy and Academic Lead for the School of English and Professional Communication. Course content authored by Subramani is licensed to AMASAMYA under a primary academic partnership.
- **Commercial Revenue Sharing:** Revenue generated from Academy student subscriptions, corporate DEI communication licenses, and institutional curriculum packages is shared equitably between Akhilesh Malani and L. Subramani following direct platform infrastructure expenses.
- **Joint Certification Credibility:** Course completion certificates issued by the Academy are co-signed by both Akhilesh Malani and L. Subramani, providing learners with combined validation from enterprise accessibility engineering and senior journalism.

7. Regulatory Posture & Trust Compliance

- **DPDP Act 2023 Compliance:** Enrolment in Year One is restricted to adults (18+) to eliminate minor-consent regulatory overhead. Full digital consent and explicit data privacy terms implemented on the portal.
- **Credential Positioning:** Marketing will strictly position credentials as 'Certificates of Professional Completion' rather than university degrees or diplomas, maintaining compliance with UGC and AICTE ed-tech guidelines.
- **Accessibility Assurance:** Complete compliance with RPwD Act 2016, WCAG 2.2 AA, and GIGW 3.0. The platform's own Accessibility Conformance Report (VPAT 2.4) will be published openly in Phase 1 as an unassailable trust signal.

8. Year-One Extended Team & Budget Estimates

Year One operates on a lean, contractor-based model without full-time payroll overhead:

- **Legal & Compliance Counsel:** Partnership agreement, licensing draft, DPDP consent review (~INR 1,00,000).
- **Accessible Audio Production Engineer:** Professional audio mastering and acoustic balancing for the first 20 core audio lessons (~INR 50,000 to 1,00,000).
- **Independent Accessibility QA Reviewer:** External third-party blind accessibility auditor to conduct independent monthly conformance audits (~INR 15,000 per audit cycle).
- **Community & Peer Circle Lead:** Part-time manager to guide peer writing circles, learner onboarding, and community forums starting in Phase 2 (~INR 25,000 to 40,000 per month).
- **Contract Educator Co-Design Lead:** Honorarium for first blind educator to author and publish a 20-lesson co-design test course in Phase 2 (~INR 75,000).

9. Risk Register & Proactive Mitigations

- **Risk: Learner Drop-off Below 40% Gate | Mitigation:** Mid-Phase 1 qualitative check-ins; introduce buddy and peer accountability systems to catch curriculum friction early.
- **Risk: Educator Authoring Tool UX Friction | Mitigation:** Keep Phase 1 tool constrained to a clean, non-visual audio recorder plus MCQ/short-answer quiz builder before expanding features.
- **Risk: Sourcing Phase 1 Learners | Mitigation:** Combine extension marketing with targeted outreach via National Association for the Blind (NAB), XRCVC, and disability networks.
- **Risk: Instructor Feedback Scalability | Mitigation:** Introduce structured self-evaluation rubrics and peer review circles, keeping instructor review focused on capstone milestone submissions.
- **Risk: Founder Key-Person Dependency | Mitigation:** Maintain documented curricula and operational playbooks from Day 1; designate trusted domain advisors per pillar.

10. Discussion Prompts for L. Subramani (Feedback & Alignment)

To finalize Phase 1 curriculum production and educator workflows, your specific insights on the following five focal points are requested:

Prompt 1: Curriculum Sequencing & Fast-Track Assessment

Does the proposed four-track structure (Foundations -> Corporate Writing -> Executive Verbal Fluency -> Journalism/Advocacy) align with your pedagogical approach? How should we structure an entry-level assessment that allows advanced screen-reader users to skip Track A and enter directly into Track B?

Prompt 2: Audio-First Lesson Length & Pedagogical Structure

For visually impaired adults learning professional English, what lesson duration and cadence have proven most effective in your experience? (e.g. 5-minute focused micro-lessons with drills vs. 20-minute comprehensive lecture masterclasses).

Prompt 3: The Audio-to-Text Writing Bridge

When teaching corporate writing (emails, summaries, reports), how should audio instruction connect to text editing for screen reader users? What specific text exercises (e.g. editing intentional errors, rewriting ambiguous memos) should students complete?

Prompt 4: Copyediting Rubrics & Early CopyAudit Heuristics

When you copyedit student work, what are the top 3 to 5 common errors or habits you look for first (e.g. passive voice overuse, vague phrasing, structural clutter)? Defining these rules will serve as the exact blueprint for our Year Two CopyAudit engine.

Prompt 5: Peer Circles & Scalable Evaluation Mechanics

How can we best structure peer writing circles so that learners give and receive meaningful feedback on business writing without requiring you to manually line-edit every submission as cohorts expand?

11. Immediate Next Steps & Phase 1 Kick-Off

- **1. Leadership Alignment:** L. Subramani reviews this Version 2.1 blueprint and shares feedback on Section 10 prompts.
- **2. Curriculum Lock:** Finalize syllabus and scripts for the initial 8 audio lessons across Tracks A and B.
- **3. Web Platform MVP Deployment:** Deploy MVP student portal, audio player, and educator authoring interface on the web.
- **4. Cohort 1 Enrolment:** Open applications for Cohort 1 (30 verified blind learners) and kick off Phase 1.
